Question 1:
Partial anomalous pulmonary venous return (PAPVR) often occurs at different genetically encoded disease. A typical example is?

- Turner syndrome

*Explanation:*
A typical example is the numerical chromosomal aberrations conditional Turner syndrome with a higher prevalence PAPVR

- Down syndrome
- Edwards syndrome
- Cri du chat syndrome
- Patauuv syndrome

Question 2:
How many percent occurrence of a partial anomalous pulmonary venous return (PAPVR) is associated with atrial septal defect?

- 85% - 90%

*Explanation:*
Around 85% - 90% of the PAVPR is associated with atrial septal defect.

*Reference:*

- 70% - 80%
- 60% - 70%
- 50% - 60%
Partial anomalous pulmonary venous drainage

Question 3:

How many percent occurrence of a partial anomalous pulmonary venous return (PARVR) is associated with a trial septal defect?

- 85% - 90%

Explanation:

Around 85% - 90% of the PAVPR is associated with atrial septal defect.

Reference:

- 70% - 80%
- 60% - 70%
- 50% - 60%
